MEMBER TECHNOLOGY
Serving you since 1978

With approximately 75% of the workforce requiring some form of vision correction, employer groups are looking for high quality vision care coverage. Avēsis is leading the industry in delivering essential and innovative vision care solutions to best meet the needs of our members.

Getting Started is Easy

Helping members get the most out of their vision benefits is one of Avēsis' top priorities. We have created a web portal and implemented tools to allow members to manage their vision care benefits with ease. Whether just checking to see what the plan covers, or verifying their benefit eligibility, www.avesis.com gives members the ability to securely log in to their account and immediately locate vital information whenever needed.

Members Can:

Print ID Cards

If your ID card has not yet arrived in the mail, or has been lost and you are in need of service, members can easily create a replacement, complete with their name and all group-specific information.

View their Benefit Summary

Once you are registered as an Avēsis member, you can easily view the benefits offered in your plan design by securely logging in to your account on www.avesis.com.
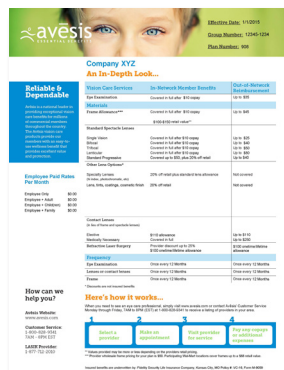

Search for a Provider

Since Avēsis has an extensive nationwide provider network offering over 46,000 points-of-access, we have made our provider finder search technology intuitive. Members can easily search for a participating provider by zip code, city or state. To check for a specific provider or location, a search by provider or office name is also available.

Members are also invited to nominate any eye care provider who does not currently participate with Avēsis.

Access Vision Data

Avēsis provides information on overall vision care through a host of frequently asked questions, a comprehensive glossary, and vital vision facts.
